## October 2023

## 24 ${ }^{\text {th }}$ Annual North Country

## Survey of the Community

Many opinions and behaviors continue to be very consistent, and many have dramatically changed.

# The Twenty-fourth Annual North Country Survey of the Community 

Based on 1,171 interviews of adult residents conducted October 23 - November 1, 2023

## Section 1 - Introduction

#### Abstract

The Center for Community Studies at Jefferson Community College in Watertown, New York was established in October 1999, to engage in a variety of community-building and community-based research activities and to promote the productive discussion of ideas and issues of significance to our Northern New York State region. In collaboration with community partners, the Center conducts research that will benefit the local population, and engages in activities that reflect its commitment to enhancing the quality of life of the area.

The annual Survey of the Community is one specific activity conducted each year by the Center to gauge the attitudes and opinions of a representative sample of adult citizens. This activity results in a yearly updated inventory of the attitudes and opinions of adult citizens of the region. The first year of this community survey was 2000, when the survey was completed exclusively in Jefferson County in April. For the following six years this Jefferson County community survey continued to be completed each year in April (2001-2006). Due to community support and interest for this type of community survey that extended beyond Jefferson County, the Advisory Board of the Center and Administration of the College determined in 2007 that it would be meaningful service to the region if the survey was also completed using a similar survey instrument annually in neighboring Lewis County. Hence, starting in October 2007 a survey in Lewis County has been completed in October of each of the seventeen years, 2007 through 2023, while the Jefferson County survey continued to be completed annually, as well. Similarly, starting in 2015 a survey in St. Lawrence County has been completed each of the nine years, 2015 through 2023. In summary, three county-specific annual surveys have been completed in each year since 2015, with a total of 24 years of surveying Jefferson County adults (each of the years 2000-2023), a total of 17 years of surveying Lewis County adults (each of the years 2007-2023), and a total of 9 years of surveying St. Lawrence County adults (each of the years 2015-2023).

This document is a summary of the results of the 2023 North Country Annual Survey of the Community in all of Jefferson, Lewis, and St. Lawrence Counties, including trend analysis comparisons with the results of community surveys from the past twenty-three years when possible. The result is that this document is a summary of 50 separate countyspecific community surveys completed in Northern New York since 2000. In addition, the key community demographic characteristics of Gender, Age, Education Level, Household Income Level, Military Affiliation, Race/Ethnicity, and Political Ideology are investigated as potential explanatory variables that may be associated with or linked to quality-of-life indicators for the region, using the current 2023 survey results. It is standard methodology with professional surveys to provide this more detailed information to the reader - information that may assist in explaining the overall findings - by reporting the results for all subgroups within these key demographic variables. Finally, results in each of the neighboring counties of Jefferson, Lewis, and St. Lawrence are presented, when possible, to allow county comparisons.

The results of this annual study provide important information about contemporary thinking of citizens; and, over time, will continue to provide important baseline and comparative information as well.

## Section 1.1 - Methodology - How These Data Were Collected

The original survey instrument used in the annual survey of the community was constructed in Spring 2000 by a team of Jefferson Community College faculty. There have been slight modifications to the survey instrument throughout the 23 subsequent years since its first version in 2000, however, the goal of this annual survey is to longitudinally track community indicators, and as a result, every effort has been made to maintain consistency in the survey instrument. The instrument includes 21 tracked community quality-of-life indicators, as well as approximately 10 other tracked community and adult resident characteristics. At times, the instrument is modified to accomplish objectives that are not longitudinally tracked in nature. The total survey length each year is approximately $30-40$ questions, with an additional set of approximately 10 demographic questions.

The primary goal of the North Country Annual Survey of the Community is to collect data regarding quality-of-life issues of importance to the local citizens. A secondary goal is to provide a very real, research-based learning experience for undergraduate students enrolled at Jefferson Community College. In accomplishing this second goal, students are involved in all aspects of the research, from question formation to data collection (interviewing), to data entry and cleansing, to data analysis. The students analyze the data collected in this study annually as assignments and projects in statistics classes. However, all final responsibility for question-phrasing, question-inclusion versus omission, final data analysis, and
final reporting of findings (this document) lies exclusively with the professional staff of the Center. The decision to include any question as a legitimate and meaningful part of an annual survey is made exclusively by the Center. Similarly, data analysis of the information collected through the annual survey will transpire with faculty and students in the classrooms at Jefferson Community College; however, any statistical analysis reported in this document has been completed by the professional staff of the Center. Copies of the introductory script and survey instrument used in this study are attached as Appendix IV.

In accordance with the American Association of Public Opinion Research (AAPOR) Transparency Initiative pledge, the following details and disclosure for the telephone-interviewing, intercept-interviewing, and online surveying employed in this study, including the following characteristics and facts should be considered by any reader:

1. (T) Dates of Data Collection: October 23 - November 1, 2023.
2. (R) Recruitment:

Telephone: All telephone participants were recruited to participate via random selection from a list of all available valid active residential and cellular telephone lines in Jefferson, Lewis, and St. Lawrence Counties, New York, USA.
Intercept: All face-to-face participants were recruited as they entered or exited the PX and the Commissary on post at Fort Drum, Jefferson County, New York, USA.
Online: All online participants were recruited to participate via an email invitation with a link to the survey embedded.
3. (A) Population Under Study: All adult residents of Jefferson, Lewis, and St. Lawrence Counties, New York, USA. There are approximately 250,000 residents in the region. Approximately 190,000 of the 250,000 residents are adults, it is these adults who are the population of interest in this study.
4. (N) List Source: Telephone: Electronic Voice Services, Inc., www.voice-boards.com

Intercept: No list utilized
Online: $\quad$ Bulk Email Superstore, and DataAxle.
5. (S) Sampling Design:

Telephone: The entire phone list described in \#2 was randomized, and approximately 10,000 valid residential and cellular phone numbers were selected to contact to invite to participate in the survey.
Intercept: Every adult who attended either the PX or Commissary the afternoons and evenings of October 24-25 and November 1, 2023 was invited to participate.
Online: $\quad$ The entire email address list described in \#4 was randomized, and approximately 30,000 email addresses of residents of Jefferson, Lewis, and St. Lawrence Counties, NY were selected to contact to invite to participate in the survey.
6. (P) Population Sampling Frame:

Telephone: As described in \#2, the sampling frame includes all available residential listed phone numbers, for adults in Jefferson, Lewis, and St. Lawrence Counties, NY, both landlines and cellular phones included.
Intercept: All military-affiliated adult residents of Jefferson, Lewis, and St. Lawrence Counties, New York, USA.
Online: As described in \#5, the sampling frame includes all available email addresses of residents of Jefferson, Lewis, and St. Lawrence Counties, NY.

## 7. (A) Administration:

Telephone: Survey administered via telephone from a virtual remote call center, only in English, using Momentive as the CATI system. No incentives or rewards were offered to participants.
Intercept: Survey administered face-to-face on post at Fort Drum, Jefferson County, New York, USA, only in English. No incentives or rewards were offered to participants.
Online: $\quad$ Survey administered online via an email invitation, only in English, using Momentive. No incentives or rewards were offered to participants.
8. (R) Researchers: The study is an annual survey completed by the Center for Community Studies at Jefferson Community College, with funding provided by the College and four community sponsors: CarFreshner, Corp., the Board of Legislature of Lewis County, New York; the Northern New York Community Foundation, Inc.; and the Development Authority of the North Country, Inc., Watertown, New York, USA
9. (E) Exact Wording of Survey: The survey instrument is attached as an appendix.
10. (N) Sample Sizes: As is discussed in much greater detail for this study later in this report: $n=1,171$ overall for the study, with an overall average margin of error of $\pm 3.2 \%$, including the design effect due to weighting. County-specific sample sizes and margins of error are: in Jefferson County $\mathrm{n}=433$ and the average margin of error is $\pm 5.3 \%$; in Lewis County $n=349$ and the average margin of error is $\pm 5.9 \%$; and in St. Lawrence County $\mathrm{n}=389$ and the average margin of error is $\pm 5.6 \%$
11. (C) Calculation of Weights: As is discussed in much greater detail for this study later in this report: results are weighted by gender, age, educational attainment, military affiliation, and race/ethnicity, and calibrated for sampling modality (the design effect in this study is approximately 2.0). At times a small set of political polling and election forecasting survey items are included in this study, and as a result, additional weighting and calibration for political party affiliation and differential partisan nonresponse bias were applied. Target weighting parameters for demographic characteristics are obtained from the U.S. Census for gender, age, race/ethnicity, and educational attainment, and the Fort Drum Regional Liaison Organization for military affiliation. County Election Boards were consulted for party affiliation weight targets for election forecasting that has been included, and past polling analyses have been used for development of differential partisan nonresponse bias weight targets.
12. (Y) Contact Information: Mr. Joel LaLone, Director, Center for Community Studies, contact information on page 3.

Further details of study methodology and sampling include that a total of 1,171 interviews of Jefferson, Lewis, and St. Lawrence County adult residents were completed. A mixed-mode sampling methodology was employed in this study with three blended samples: 561 interviews/surveys completed using live telephone-interview methodology, 78 intercept interviews (face-to-face) completed at Fort Drum, New York, and finally, 532 additional surveys completed via a nonprobability online survey after email invitation mode. To be eligible to complete the survey, the resident was required to be at least 18 years old. All telephone calls were made between 4:00 and 9:00 p.m. on the evenings of October 23 October 30, 2023 using both a physical call center, and a virtual remote call center that was supervised synchronously online, each from Watertown, New York. The intercept interviews on Fort Drum were completed on October 24-25, 2023 at the entrance of the PX and Commissary, with prior approval obtained from the Office of the Garrison Commander. The Jefferson Community College students who completed both the telephone and face-to-face interviews had completed training in both human subject research methodology and effective interviewing techniques. Professional staff from the Center supervised all interviewing at all times. The online sampling was supervised by the professional staff at the Center, with two reminder follow-up emails sent to any non-responders over the ten-day sampling time spanning October 23 November 1, 2023. No rewards, neither pre-incentives nor post-incentives, were used in any of the three sampling modalities to encourage participation.

When each of the telephone numbers in the random telephone sampling portion of this study was attempted, one of four results occurred: Completion of an interview; a Decline to be interviewed; No Answer/Busy; or an Invalid Number (including both disconnected numbers, as well as numbers for individuals who do not currently reside in any of the three sampled counties). Voluntary informed consent was obtained from each resident before the interview was completed, during all three sampling modalities. This sampling protocol included informing each resident that it was his or her right to decline to answer any and all individual questions within the interview. To be categorized as a completed interview at least one-half of the questions on the survey had to be completed. A resident's refusal to answer more than one-half of the questions was considered a decline to be interviewed. The typical length of a completed survey was approximately 10 minutes. Telephone declines to be interviewed (refusals) were not called back in an attempt to convince the resident to reconsider the interview. If no contact was made at a telephone number (No Answer/Busy), a maximum of four call-backs were made to the number. Telephone numbers that were not successfully contacted were ultimately categorized as No Answer/Busy. No messages were left on answering machines at homes where no person answered the telephone. The introductory script of the online version of the survey acquired consent and validation of adult age and within-region residence. The completion rate results for the study are summarized in Table 1.

## Table 1 - Participation Rates for the $24^{\text {th }}$ Annual North Country Survey of the Community

| Methodology Utilized | Number of <br> Surveys <br> Completed <br> (unweighted <br> contribution to the <br> sample) | Number of <br> Surveys <br> Completed <br> (weighted <br> contribution to the <br> sample) | \% of Total <br> Sample <br> (weighted <br> contribution to the <br> sample) |
| :--- | :---: | :---: | :---: |
| Live Telephone interviews on Landlines | 211 | 136 | $\mathbf{1 2 \%}$ |
| Live Telephone interviews on Cell Phones | 350 | 348 | $\mathbf{3 0 \%}$ |
| Online surveys (nonprobability panel, via email) <br> Intercept surveys - face-to-face at Fort Drum | 532 | 582 | $\mathbf{5 0 \%}$ |
| Totals | $\mathbf{7 8}$ | 105 | $\mathbf{9 \%}$ |

The response rates for the different sampling modalities in this study are approximately: $8 \%$ of all valid phone numbers attempted via live-interviewer telephone modality; $3 \%$ of all valid email invitations sent to a nonprobability opt-in panel to complete the online modality; and over $90 \%$ of all individuals approached at Fort Drum via the intercept modality.

Within the fields of social science and public opinion research, all three of these response rates are considered very successful. The methodology employed in this annual survey continues to meet public opinion research industry standards.

## Section 1.2 - Demographics of the Sample - Who was Interviewed?

This section of the report includes a description of the results for the demographic variables included in the survey sample. The demographic characteristics of the sampled adult residents can be used to attain three separate objectives.

1. Initially, this information adds to the knowledge and awareness about the true characteristics of the population of adult residents in a sampled county (e.g. What is the typical household composition, educational profile, and household income level in a county?).
2. Secondly, this demographic information facilitates the ability for the data to be sorted or partitioned to investigate for significant relationships - relationships between demographic characteristics of residents and their attitudes and behaviors regarding the quality of life in the North Country. Identification of significant relationships allows local citizens to use the data more effectively, to better understand the factors that are correlated with various aspects of life in the county.
3. Finally, the demographic information also serves an important purpose when compared to established facts about the county adult populations to analyze the representativeness of the sample that was randomly selected in this study, and to determine the post-stratification weighting schematic to be applied to the data.
The results for the demographic questions in the survey are summarized in Table 2.

## Table 2 - Demographics of the October 2023 North Country Sample - The Nature of this Sample

| Demographic Characteristics: | Weighted \% Contribution to the Jefferson Sample (raw sample size) | Weighted \% Contribution to the Lewis Sample $=$ (raw sample size) | Weighted \% Contribution to the St. Lawrence Sample (raw sample size) |
| :---: | :---: | :---: | :---: |
| Gender |  |  |  |
| Male | 52\% | 47\% | 49\% |
| Female | 47\% | 53\% | 51\% |
| Non-binary | 1\% | 0\% | 0\% |
| Age |  |  |  |
| $18-39$ years of age | 46\% | 26\% | 34\% |
| $40-59$ years of age | 28\% | 36\% | 33\% |
| $60-69$ years of age | 13\% | 20\% | 16\% |
| 70 years of age or older | 12\% | 18\% | 17\% |
| Education Level |  |  |  |
| High school graduate (including GED) or less | 44\% | 49\% | 42\% |
| Some college, no 4+ year degree | 35\% | 32\% | 37\% |
| Bachelor's degree or higher | 20\% | 19\% | 21\% |
| Annual Household Income |  |  |  |
|  |  |  |  |
| \$50,001- $\$ 100,000$ | 35\% | 50\% | 42\% |
| More than \$100,000 | 22\% | 19\% | 23\% |
| Occupation |  |  |  |
| Retired | 22\% | 30\% | 29\% |
| Military employed | 20\% | 2\% | 0\% |
| Employed, non-military, but not self-employed | 37\% | 47\% | 57\% |

| Yes $\quad$ Reside in Nort courry | 28\% | 10\% | 2\% |
| No | 72\% | 90\% | 98\% |
| County Sample Sizes | $n=433$ | $n=349$ | $n=389$ |

## Table 2 - Continued - Demographics of the October 2023 North Country Sample - The Nature of this Sample <br> (\%'s weighted by Gender, Age, Education Level, Race/Ethnicity, Military Affiliation, and Sampling Modality)

| Demographic Characteristics: | Weighted \% Contribution to the Jefferson Sample (raw sample size) | Weighted \% Contribution to the Lewis Sample $\qquad$ (raw sample size) | Weighted \% Contribution to the St. Lawrence Sample (raw sample size) |
| :---: | :---: | :---: | :---: |
| Race/Ethnicity |  |  |  |
| Black/African American | 4\% | 1\% | 1\% |
| White/Caucasian | 83\% | 94\% | 91\% |
| Hispanic | 7\% | 2\% | 2\% |
| Asian/Pacific Islander | 3\% | 0\% | 0\% |
| Native American | 0\% | 1\% | 3\% |
| Multiracial | 3\% | 2\% | 3\% |
| Household Composition - Anv children under age 18 in the home? |  |  |  |
| Yes Household | 28\% | 30\% | 31\% |
| No | 72\% | 70\% | 69\% |
| Political Ideology |  |  |  |
| Very Conservative | 7\% | 7\% | 9\% |
| Conservative | 24\% | 33\% | 24\% |
| Middle of the Road | 46\% | 37\% | 32\% |
| Liberal | 7\% | 12\% | 14\% |
| Very Liberal | 3\% | 3\% | 5\% |
| Not Sure | 14\% | 8\% | 16\% |
| County Sample Sizes | $n=433$ | $n=349$ | $n=389$ |

The distributions of cities, villages, or towns of residence of the participating respondents in the Twenty-fourth Annual North Country Survey of the Community after application of post-stratification weights for Gender, Age, Education, Military Affiliation, Race/Ethnicity, and Sampling Modality closely parallel that which is true for the distribution of all North Country adults - the entire counties were proportionally represented very accurately in this study.

In general, Table 2 demonstrates that after weighting the data collected in this study for Gender, Age, Education, Military Affiliation, Race/Ethnicity, and Sampling Modality, the responses to the demographic questions for the residents who are included in the survey (those who actually answered the telephone and completed the survey, those who completed intercept surveys at Fort Drum, and those who completed the survey online) appear to closely parallel that which is true for the entire adult populations of the counties. The targets for demographic characteristics were drawn from the U.S. Census updates for the counties. The targets for military affiliation were generated with the assistance of the Fort Drum Regional Liaison Organization. Gender, Age, Education, Military Affiliation, and Race/Ethnicity were selected as the factors by which to weight the survey data, since the data collected in this Annual North Country Survey of the Community is susceptible to the typical types of sampling error that are inherent in survey research methodology: women were more likely than men to agree to a survey; older residents are more likely to participate in the survey than younger adult residents; those individuals with higher formal education levels are more likely to agree to the interviews; and minorities are less likely to participate than those who self-identify as white. Standard survey research methodology has shown that regardless of the subject of the survey, these are expected sources of sampling error. To compensate for this overrepresentation of females, older residents, white residents, those who are not affiliated with the military, and the highly educated in the sample collected in this study, post-stratification weights for Gender, Age, Education Level, Military Affiliation, Race/Ethnicity, and Sampling Modality have been applied in any further analysis of the data analyzed in this report.

When using the sample statistics presented in this report to estimate that which would be expected for the entire North Country adult population, the exact margin of error for this survey is question-specific. The margin of error depends upon the sample size for each specific question, the resulting sample percentage for each question, the confidence level utilized, and the sampling design effect. Sample sizes tend to vary for each question on the survey, since some questions are only appropriate for certain subgroups, and/or as a result of persons refusing to answer questions. In general, the results of this survey for any questions that were answered by the entire sample of 1,171 North Country adult residents may be generalized to the population of all adults at least 18 years of age residing in the North Country with a $95 \%$ confidence level to within a margin of error of approximately $\pm 3.2$ percentage points. For questions that were posed only to certain specific subgroups the resulting smaller sample sizes allow generalization to the specific subpopulation of all adults at least 18 years of age in that subgroup (e.g. generalization of some specific characteristics of sampled Lewis County males to all males in Lewis County) with a $95 \%$ confidence level to within a margin of error of larger than $\pm 3.2$ percentage points. Table 3 is provided as a guide for the appropriate margin of error to use when analyzing subgroups of the entire group of 1,171 interviewed adults. Note that the approximate margins of error provided in Table 3 are average margins of error, averaging across all possible sample proportions that might result between $0 \%$ and $100 \%$, and please note that all are using a $95 \%$ confidence level, and all include the design effect of 2.0 for this study. For more specific detail regarding the margin of error
for this survey, please refer to Appendix III of this report and/or contact the professional staff at the Center for Community Studies.

## Table 3 - Margins of Error for Varying Sample Sizes

| Sample Size <br> ( $\mathbf{n}=\ldots$ ) | Approximate <br> Margin of Error |
| :---: | :---: |
| $\mathbf{3 0}$ | $\pm 20.2 \%$ |
| $\mathbf{5 0}$ | $\pm 15.7 \%$ |
| $\mathbf{1 0 0}$ | $\pm 11.1 \%$ |
| $\mathbf{1 5 0}$ | $\pm 9.0 \%$ |
| $\mathbf{2 0 0}$ | $\pm 7.8 \%$ |
| $\mathbf{2 5 0}$ | $\pm 7.0 \%$ |
| 300 | $\pm 6.4 \%$ |
| $\mathbf{3 4 9}$ | $\pm 5.9 \%$ |
| $\mathbf{3 8 9}$ | $\pm 5.6 \%$ |
| $\mathbf{4 0 0}$ | $\pm 5.5 \%$ |
| $\mathbf{4 3 3}$ | $\pm 5.3 \%$ |
| $\mathbf{5 0 0}$ | $\pm 5.0 \%$ |
| $\mathbf{6 0 0}$ | $\pm \pm .5 \%$ |
| $\mathbf{7 0 0}$ | $\pm 4.2 \%$ |
| $\mathbf{8 0 0}$ | $\pm 3.9 \%$ |
| $\mathbf{9 0 0}$ | $\pm 3.7 \%$ |
| $\mathbf{1 , 0 0 0}$ | $\pm 3.5 \%$ |
| $\mathbf{1 , 1 0 0}$ | $\pm \pm 3 \%$ |
| $\mathbf{1 , 1 7 1}$ | $\pm 3.2 \%$ |

Finally, the margin of error is a measurement of random error, error due to simply the random chance of sampling such as when randomly flipping fair coins. However, in survey research, it is not coins that are being flipped; it is humans who are being interviewed. When surveying humans there are other potential sources of error, sources of error in addition to random error (which is the only error encompassed by the margin of error). Response error, nonresponse error, process error, bias in sample selection, bias in question-phrasing, lack of clarity in question-phrasing, social desirability bias, acquiescence bias, satisficing, and undercoverage are common sources of other-than-random error. Methods that should be, and have been in this North Country study, employed to minimize these other sources of error are: maximum effort to select the sample randomly, piloting and testing of utilized survey questions, extensive training of all data collectors (interviewers), thorough cleansing of data, calibration of data, and application of post-stratification algorithms to the resulting sampled data. Hence, when using this study data to make estimates to the entire North Country adult populations, as is the case in standard survey research practices, the margin of error will be the only error measurement cited and interpreted.

In order to maximize comparability among the twenty-four years of annual surveys ( 50 studies) that have been completed in North Country by the Center for Community Studies between 2000 and 2023, the procedures used to collect information and the core questions asked have remained virtually identical. The total number of interviews completed in any one county in a year has ranged from 328 to 832 . All interviewers have been similarly and extensively trained preceding data collection each year. Data management, cleansing, and transformation techniques used have remained similar throughout. The survey methodology used to complete the Twenty-fourth Annual North Country Survey of the Community is comparable to that used in the previous twenty-three years. Furthermore, post-stratification weights for gender, age, and education level have also been applied to all results from the first thirteen years of surveying, with phone ownership (landline only vs. cell only vs. both) added as an additional weighting factor in 2013, and military affiliation and race/ethnicity added as additional weighting factors in 2015 as parts of the continuous improvement methods applied at the Center in an attempt to maximize the representativeness of the collected sample of adults. Finally, online surveying was blended into the overall sample for the first time in 2019. This maintenance of consistent methodology from year to year allows for valid comparisons for trends over the twenty-four-year period that will be illustrated later in this report.

When comparing results across time, the sample sizes collected each year should be considered. The sample sizes for each of the years of this Annual Survey of the Community are summarized in the following Table 4.

## Table 4 - County-specific Sample Sizes for Each Year of the North Country Annual Surveys of the Community

| County | 2000 | 2001 | 2002 | 2003 | 2004 | 2005 | 2006 | 2007 | 2008 | 2009 | 2010 | 2011 | 2012 | 2013 | 2014 | 2015 | 2016 | 2017 | 2018 | 2019 | 2020 | 2021 | 2022 | 2023 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Jefferson | 340 | 342 | 413 | 341 | 348 | 355 | 354 | 382 | 421 | 382 | 414 | 406 | 380 | 400 | 422 | 400 | 416 | 441 | 575 | 581 | 587 | 503 | 563 | 433 |
| Lewis |  |  |  |  |  |  |  | 409 | 393 | 404 | 400 | 409 | 421 | 381 | 328 | 396 | 398 | 447 | 426 | 539 | 474 | 550 | 465 | 349 |
| St. Lawrence |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | 442 | 354 | 374 | 466 | 832 | 435 | 476 | 430 | 389 |

Finally, throughout this report, key community demographic characteristics of Gender, Age, Education Level, Political Ideology, Military Affiliation, Race/Ethnicity, and Household Income Level are investigated as potential explanatory variables that may be associated with quality-of-life indicators and other community behavior and opinion variables for the region. It is standard methodology with professional surveys to provide this further rich information to the reader -
information that may assist in explaining the overall findings - by reporting the cross-tabulated results for all subgroups within key demographic variables. The results provide important information about contemporary thinking of citizens and over time will continue to provide important baseline and comparative information as well. Again, for more specific details regarding tests of statistical significance completed within this study, please refer to the appendices of this report and/or contact the professional staff at the Center for Community Studies.

All data compilation and statistical analyses within this study have been completed using SPSS, Release 28.

# Section 2 - Topline Summary of Findings The Most Notable Study Findings in 2023 - 

## Summary - what is changing, or most surprising, among the annual 21 community indicators studied:

## 1. Which indicators in 2023 differ most from their Long-term Average results?

An effective method to assess which community characteristics, or indicators, are showing the most change in the current data relative to typical results is to compare the 2023 result to the long-term average (LTA) result for each indicator. This graph illustrates these comparisons of rates of responding "Excellent or Good" (the "delta's") for each indicator, separated by county. The most noteworthy observations from this visualization are that in 2023 satisfaction with availability of good jobs is well higher than average, while the results for each of the following indicators are well below long-term averages:

- Availability of behavioral health services ( $2 \%+$ below LTA in each county)
- Quality of K-12 education ( $4 \%+$ below LTA in each county)
- Health care access ( $4 \%+$ below LTA in each county)
- The overall quality of life in the area ( $6 \%+$ below LTA in each county)
- Policing and crime control ( $8 \%+$ below LTA in each county)
- Healthcare quality (below LTA 7\%+ in each county)
- Availability of childcare ( $11 \%+$ below LTA in each county)
- Availability of care for the elderly ( $9 \%+$ below LTA in each county)
- Availability of housing ( $13 \%+$ below LTA in each county)

In summary, by these metrics, availability of housing is the community characteristic that currently shows the greatest decrease in satisfaction among North Country residents among the studied indicators, closely followed by availability of care for the elderly, and availability of childcare. (Tables 7-9)

2. Perceived Quality of Life in One's Community - Comparison of the three North Country Counties - Twenty community characteristics are studied each year in the three North Country counties (with a $21^{\text {st }}$ included in only Jefferson County, Downtown of Watertown). These characteristics, or indicators, have been developed over the past two-plus decades and are intended to represent all components of what comprise a community - jobs, government, education, healthcare,
housing, recreation, etc. It is difficult not to recognize that in 2023 there are stark differences present when comparing the three represented counties. In summary, quite unanimously, Lewis County residents show the most satisfaction with the characteristics of their communities, followed by Jefferson County residents, and in comparison, residents of St. Lawrence County express by far the most dissatisfaction with the characteristics of their county. To illustrate, Lewis County residents reported the highest rates of "Excellent or Good" for 16 of the 20 studied community indicators. The only exceptions were that in Jefferson County the highest rates of "Excellent or Good" were found for each of shopping opportunities and cost of energy, and in St. Lawrence County the highest rates of "Excellent or Good" were found for each of real estate taxes and access to higher education. Furthermore, St. Lawrence County residents reported the highest rates of "Poor" for 17 of the 20 studied community indicators. (Tables 5 and 6)

## Highlights for individual community characteristics - among these items that are tracked each year, which are showing most notable change?

3. Pocketbook Issues - Concern with Inflation and the Cost of Living - North Country residents in 2023 continued to express that inflation is problematic. When asked the open-ended question, "What do you think is the single largest issue that is facing residents of the North Country right now?", inflation was by far the most common free response, provided by $28 \%$ of participants. Concern with inflation is significantly higher among Lewis County residents when compared to the other two studied counties, and among those North Country residents who describe themselves as conservative in their political beliefs. (Table 47)
4. Personal Financial Situation - Some Recovery Evident Between 2022 and 2023 - Compared to results found in 2017-2018, there is strong evidence that North Country residents do not currently feel positive about their personal financial situations. In 2018, only 13\% of participants reported that their financial situation had "gotten worse" in the preceding twelve months. In 2023 this "gotten worse" rate in the region is triple that which was found in 2018, the 2023 rate is $39 \%$. However. this $39 \%$ "gotten worse" in 2023 among North Country adults is a significant decrease from the all-time high of over $51 \%$ that was found one year ago in 2022. The question that will be interesting to address next year in 2024 is whether or not this 2023 short-term improvement in personal financial situations will continue trending in that direction. While only one-in-nine North Country participants in 2023 (11\%) indicate that their personal financial situation has "gotten better", this rate more than doubles to $23 \%$ among those who are from households with annual income of $\$ 100,000$ or more. (Table 34)
5. Good Job Availability Locally Continues to be Perceived More Positively than Ever - Availability of good jobs has been studied continuously for 24 years and for the past three years (2021-2023) the rate of assessing as "Excellent or Good" has been the highest ever found, with one exception - St. Lawrence County. In each of Jefferson and Lewis Counties, participants in 2023 continue to rate job availability very positively ( $32 \%$ and $35 \%$, respectively), but not in St. Lawrence County. The "Excellent or Good" rate in St. Lawrence County plummeted from $27 \%$ in 2022 to only $16 \%$ in 2023. Interestingly, females and those from high income households in the North Country are least likely to feel that the availability of good jobs locally is "Excellent or Good". (Table 21)
6. Quality of K-12 Education, Residents are Returning to Pre-pandemic Levels of Satisfaction Every year that this education-related question has been included in the study, the Lewis County residents have responded with the most positive assessments of the quality of their K-12 schools when compared to the other two studied counties, and without question, Lewis County adults are very proud of their schools (in 2023, $76 \%$ rate as "Excellent or Good"). In each of the three studied counties the rates of assessing local K-12 schools as "Excellent or Good" decreased continuously between 2017-2022 (Jefferson from 67\% to $52 \%$, Lewis from $80 \%$ to $65 \%$, and St. Lawrence from $72 \%$ to a lowest $49 \%$ ). However, between 2022-2023 the rates in each of Lewis and St, Lawrence have increased, returning to pre-pandemic levels (Lewis between 2022-2023 increased from 65\% back up to $76 \%$, and St. Lawrence increased from $49 \%$ back up to $57 \%$ ) while Jefferson remained quite stable. Along with the previously noted very positive result in Lewis County, other studied subgroups that have particularly positive assessments of their K-12 schools include: those from households with $\$ 100,000$ annual income or more ( $64 \%$ rate as "Excellent or Good"), those age 60-69 (64\%), and those with at least a 4-year degree level of educational attainment (62\%). (Table 23)
7. Policing and Crime Control Satisfaction is Low Compared to Long-term Averages - Satisfaction with policing and crime control has decreased significantly in all three studied counties between 2020 and 2023, with rates of "Excellent or Good" in each of the counties well below the long-term averages for this community indicator. The Jefferson County 2023 rate is $46 \%$, while the long-term 2000-2023 average has been $62 \%$. The Lewis County 2023 rate is $62 \%$, while the long-term 2007-2023 average in the county has been 69\%. The St. Lawrence County 2023 rate is $44 \%$, while the long-term 2015-2023 average in the county has been $56 \%$. Note that in 2023 Lewis County residents remain, as has been the case in every year of study, more positive regarding policing and crime control than residents of the two neighboring counties. Older residents, the highly educated, and those with conservative political ideologies are the subgroups that report the greatest satisfaction with policing and crime control in the region. (Table 20)
8. Availability of Housing - Satisfaction with the availability of housing in the North Country has decreased significantly in all three studied counties between 2015 (when $55 \%-65 \%$ rated as "Excellent or Good") and the most recent two years of study (202223, when satisfaction rates have halved to approximately $30 \%$ ). In this past year there is slight improvement in Lewis County (from $25 \%$ to $36 \%$ ), however, a continued downward trend of more dissatisfaction with availability of housing has been found in both Jefferson and St. Lawrence Counties between 2022 and 2023. The more highly educated, and those from higher income households are most satisfied with the availability of housing, along with those who self-report as BIPOC (Black, Indigenous, People of Color, or non-White). (Table 26)
9. Availability of Childcare - Satisfaction with the availability of childcare in the North Country has been at an all-time low for the past two years (2022-2023), however, in this past year there is slight improvement in each of Jefferson and Lewis Counties, with
a continued downward trend of more dissatisfaction found in St. Lawrence County. Only about one-in-seven North Country residents (15\%) currently rate the availability of childcare as "Excellent or Good". When first studied in 2015-2016 the satisfaction rates were approximately $40 \%$ in the counties, which is almost triple the current rate. Interestingly, it is those adults of the age most likely to need childcare services (age 18-39) who are most satisfied with the availability (although their "Excellent or Good" rate is still a not-that-impressive, but relatively high, $20 \%$ ). Most notably, the subgroup who by far reports the highest level of satisfaction with availability of childcare is those individuals who live in a household that includes active military stationed at Fort Drum (36\% of participants who have active military stationed at Fort Drum in the household rate availability of childcare as "Excellent or Good". (Table 27)
10. What direction are things heading - In our nation? - North Country residents in 2023 have expressed clear and increasing concern that, in general, things in the United States are heading in the wrong direction. In 2023 only $14 \%$ of participants believe that things in the country are headed in the right direction, while $73 \%$ believe that things in the country are headed in the wrong direction (was $68 \%$ in 2022), with residents of Lewis County clearly the most likely to feel that things are headed in the wrong direction (over $80 \%$ in Lewis County express this sentiment in 2023). Attitude regarding the direction that things are going in our country is very strongly correlated with political ideology - only $7 \%$ of self-described conservatives indicate that they believe that things are going in the right direction, while $86 \%$ of conservatives respond with wrong direction (over a 12:1 ratio of wrong-to-right). (Table 31)
11. What direction are things heading - In New York State? - North Country residents in 2023 have expressed large concern that, in general, things in New York State are heading in the wrong direction. In 2023 only 18\% of participants believe that things in our state are headed in the right direction, while $67 \%$ believe that things in our state are headed in the wrong direction, with residents of Lewis County clearly the most likely to feel that things are headed in the wrong direction (almost $80 \%$ in Lewis County express this sentiment). Attitude regarding the direction that things are going in our state is very strongly correlated with political ideology - only $4 \%$ of self-described conservatives indicate that they believe that things are going in the right direction, while $86 \%$ of conservatives respond with wrong direction (over a $20: 1$ ratio of wrong-to-right). (Table 32)
12. What direction are things heading - In the North Country? - North Country residents are more optimistic, although not tremendously positive, with how things are going locally as $34 \%$ of participants in 2023 believe that things in their county are headed in the right direction (was $33 \%$ in 2022), while $40 \%$ in 2023 believe that things in their county are headed in the wrong direction. Residents of Lewis County are the most likely to feel that things are headed in the right direction in their county ( $37 \%$ in Lewis County express this sentiment). Results have remained relatively stable over the past four years of surveying (rates of "right direction" by county in 2020 were: $50 \%$ in Lewis, $42 \%$ in Jefferson, and $35 \%$ in St. Lawrence, and in 2023 respectively the rates are $37 \%, 34 \%$, and $33 \%$ ). Attitude regarding the direction that things are going in our local counties is not as strongly correlated with political ideology - in $2023,34 \%$ of self-described conservatives in the region indicate that they believe that things are going in the right direction in their county, while $44 \%$ of liberals respond with right direction (nowhere near the differences that emerged when these two groups evaluated the state or country). (Table 33)

## 13. Political Ideology - Residents continue to be most likely to report that they are moderate or

 middle-of-the-road, not as Liberal or as Conservative - In all three counties it has consistently been the case over the past 24 years of North Country public opinion polling that when asked one's political beliefs or ideology, "middle-of-the-road" is the most common response. Regardless of the overwhelming notion in our current society of political polarization, it remains in 2023 that North Country adult residents self-report as: 39\% middle-of-the-road; $33 \%$ conservative; $14 \%$ liberal; and $14 \%$ not sure. (2022 results were: 44\% middle-of-the-road; 32\% conservative; $14 \%$ liberal; and 10\% not sure). (Table 46)
## Revisiting several North Country resident attitudes and behaviors measured in the past, but not recently measured:

## 14.Severity of Community Health and Safety Issues - Crime, Poverty, Mental Health, Alcohol

 Abuse, Opiates Abuse, Prescriptive Drugs Abuse - Between 2016 and 2018 the Center for Community Studies included a series of survey questions regarding six separate community issues. The goal of these questions was to measure the perceived severity of each issue within North Country communities (rather than the frequency/prevalence, suggested solutions, quality of community response, or any number of other attributes that could be studied regarding these six community issues). In 2023, perceived severity questions for these six community issues were reintroduced into the annual survey study. Below is a table that includes a summary of the changes over time that have been found for each issue, and at times, a county-comparison of results. The table below is sorted from top to bottom, from largest to smallest perceived severity of issue as a "major issue" on a regionwide basis in 2023.$\left.\begin{array}{|l|c|c|c|c|c|}\hline \text { Community Issue } & \begin{array}{c}\text { Region } \\ \text { \% rate as a } \\ \text { "Major } \\ \text { Issue" in } \\ 2016-2018\end{array} & \begin{array}{c}\text { Region } \\ \text { \% rate as a } \\ \text { "Major } \\ \text { Issue" in } \\ 2023\end{array} & \begin{array}{c}\text { Jefferson } \\ \text { Results } \\ \text { \% rate as a } \\ \text { "Major Issue" } \\ 2023\end{array} & \begin{array}{c}\frac{\text { Lewis }}{\text { Results }} \\ \text { \% rate as a } \\ \text { "Major Issue", } \\ 2023\end{array} & \begin{array}{c}\text { St. Lawrence } \\ \text { Results } \\ \text { \% rate as a } \\ \text { "Major Issue" }\end{array} \\ \text { 2023 }\end{array}\right\}$

To summarize, for every community issue the adults in Lewis County in 2023 far less commonly perceive the issue as a "major" community issue than residents of either Jefferson or St. Lawrence Counties, and for each of poverty and crime St. Lawrence County residents rate the severity of these problems as "major" much more commonly than those who reside in Jefferson County. Although Heroin, or Other Opiate, Abuse remains the most commonly perceived issue as "major" in the North Country (54\% in 2023), a clear trend found over the past six years in the North Country is a significant decrease in evaluating Heroin, or Other Opiate, Abuse as a "major" community issue (from $73 \%$ in 2017 to the current $54 \%$ ). Similar decreases in the perceived severity of poverty, crime, prescriptive drug abuse, and alcohol abuse were found between 2017/2018 and 2023. However, the clear exception in perception of community issues found in this study is that the reverse trend has transpired in the North Country between 2016 and 2023 when assessing mental health - only $24 \%$ of participants in 2016 rated Mental Health as a "major" issue, while that rate has increased to $38 \%$ in 2023. To identify significant correlations between participant demographic characteristics and their perceived severities for each of the six community issues, readers are directed to the graphs located with Tables 38-43 in Section 3.1.4 of this report, and Tables 38-43 in Appendix II. (Tables 38-43)
15. Women's Reproductive Rights - There is overwhelming evidence that a large majority of adult residents in the North Country support women's reproductive rights. Participants were provided the following two statements, and asked which of the two choices they most agree with: Statement A: "Choosing abortion is a woman's right, and society should protect that right", and Statement B: "Abortion is morally wrong, and society should prohibit it". By more than a three-to-one ratio, residents are more likely to agree with Statement A rather than Statement B. More than three-fourths (76\%) of North Country residents agree with the prochoice Statement A, while less than one-fourth ( $24 \%$ ) agree with the pro-life Statement B. This sentiment resonates in each of the three individual counties studied in 2023 (the A vs. B rates of agreement by county in 2023 are: Jefferson: 78\% vs. 22\%; Lewis: 66\% vs. $34 \%$; and $76 \%$ vs. $24 \%$ ). Moreover, the most recent-past inclusion of this survey question in this annual study was in 2020 , before the 2023 overturn of the Row v. Wade decision by the United States Supreme Court. The 2023 results have shown an increase in support for Statement A (pro-choice) in each of the three counties since 2020 - Jefferson from 65\% to 78\%, Lewis from $59 \%$ to $66 \%$, and St. Lawrence from $72 \%$ to $76 \%$. Finally, throughout the North Country support for women's reproductive rights is quite ubiquitous. Among the many subgroups studied - by county, by age, by gender, by education, by military affiliation, by race/ethnicity, and by political ideology - every subgroup has a large majority within their participants who believe that choosing abortion is a woman's right, with $66 \%$ or more agreeing with Statement A in every studied subgroup, except one subgroup. The group of conservatives show less support for women's reproductive rights, however, even among this conservative subgroup a majority (56\%) agree with Statement A. (Table 44)
16. Cross-border Travel - For the first 13 years that this annual study was completed in Jefferson County (2000-2012), the question "How many times have you crossed the border to eastern Ontario during the past year?" was tracked. In 2000-2001 two-in-three ( $60 \%-70 \%$ ) of Jefferson County residents crossed the border at least once per year to eastern Ontario. This rate post-9/11 continuously decreased between 2001-2012 from $67 \%$ down to only $21 \%$ in 2012 . Over a decade later, in 2023, the rate of crossing the border remains similar with $25 \%$ of Jefferson County residents crossing the border at least once (and similarly, 29\% in St. Lawrence County, with only 9\% in Lewis County). Education level and annual household income are the two factors that are most strongly associated with cross-border travel - among those with at least a 4 -year degree $42 \%$ have crossed the border at least once in the past year, and the rate increases to $45 \%$ among those from households with annual incomes of at least $\$ 100,000$. (Table 37)
17. A Good Place to Grow Old - In 2010 and 2011, the question "Do you believe that your county is a good place to grow old?" was included in this annual study in each of Jefferson and Lewis Counties, and at that time approximately 40\% of participants responded with "very good". The question has been reintroduced into this 2023 study and a tremendous change has been observed in that the "very good" rate has decreased from $40 \%$ to only $16 \%$ in the North Country. Not surprisingly, the subgroup that is most likely to respond that their county is a very good place to grow old is those who are already 70 years of age or older. Notably, Lewis County residents, and lower education level residents, are groups with more positive assessments of their county being a very good place to grow old. (Table 35)
18. Fort Drum Support - In 2003, in Jefferson County, for the first time, a survey question about the perception that the presence of the 10th Mountain Division at Fort Drum since 1985 has improved the overall quality of life of North Country citizens was included in this annual study. Between 2003-2017 in Jefferson County the typical result was that approximately $75 \%$ of participants agreed with this perceived positive quality-of-life impact. Similarly, between 2007-2017 in Lewis County the typical result was that approximately $70 \%$ of participants agreed with this perceived positive quality-of-life impact. In 2023 this question was reintroduced and employed in all three counties and results remain very positive with $74 \%$ agreeing in Lewis County, $71 \%$ in Jefferson County, and $60 \%$ in St. Lawrence County. Note that the primary reason for this lower agreement rate in St. Lawrence County is due to a larger "no opinion" response rate, which is likely associated with the further distance from the military installation. Notably, the subgroup with the highest rate of agreement is the older residents ( $79 \%$ among those age $70+$ ), and Fort Drum impact opinion is independent of political ideology ( $71 \%$ of conservatives agree, while similarly, $68 \%$ of liberals agree). (Table 36)

## REMINDER: Cross-tabulations - the statistical tool to probe deeper and better understand

survey data - Readers are reminded that later in this report every survey question is cross-tabbed (partitioned) by levels of many demographic variables including, but not limited to: County, Gender, Age, Education Level, Annual Income, and Political Ideology. Statistics are reported for every subgroup within each of these demographic factors, both on a regional and county-specific basis. As a result, the report includes hundreds of cross-tabulation tables (in Appendix II) that report thousands of sample statistics. It is these cross-tabulation tables that readers may best use to attempt to identify significant explanatory variables that may be correlated with survey outcomes.

## Section 3 - Detailed Statistical Results

## Section 3.1 - Community Quality-of-Life Indicators

## Section 3.1.1 - Relative Standing of Community Quality-of-Life Indicators in $\underline{2023}$

The following two tables (Tables 5 and 6) highlight all twenty-one studied quality-of-life indicators in 2023, providing the ability for one to observe the most positively and most negatively perceived community aspects - to take a current snapshot of opinions/satisfactions. The community indicators are sorted from top to bottom of Table 5, from the most to the least positively perceived by residents of the tri-county region in 2023. The brown-shaded number in each row is the largest result found for each survey question, providing an easy method to determine in which of the three studied counties each quality-of-life indicator is most commonly perceived currently as excellent or good. For quick reference, considering the sample sizes collected each county in the 2023 North Country Annual Survey of the Community, a difference of 5\% or larger between any two counties (between any two numbers located in the same row) may be considered a statistically significant difference. (For more detail regarding statistical significance, please refer to Appendix III of this report: "Technical Comments - Assistance in Interpretation of the Statistical Results.")

Table 5 - SUMMARY of "Relative Standing" - Year 2023 - All 21 Quality-of-life Indicators Compared Across Counties - Rate of Responding "Excellent or Good"

| Community Indicator: | Jefferson | Lewis | St. Lawrence | Three-county Region Combined |
| :---: | :---: | :---: | :---: | :---: |
| Quality of the environment | 65\% | 84\% | 63\% | 66\% |
| Access to higher education | 57\% | 54\% | 70\% | 62\% |
| Public outdoor recreational opportunities | 60\% | 77\% | 54\% | 60\% |
| Quality of K-12 education | 50\% | 76\% | 57\% | 56\% |
| The overall quality of life in the area | 49\% | 68\% | 42\% | 48\% |
| Policing and crime control | 46\% | 62\% | 44\% | 47\% |
| Health care access | 44\% | 47\% | 36\% | 41\% |
| Health care quality | 42\% | 52\% | 33\% | 39\% |
| City, town, and village government | 31\% | 45\% | 39\% | 36\% |
| County government | 32\% | 35\% | 35\% | 34\% |
| The downtown of Watertown | 34\% | - | - | 34\% |
| Cultural and entertainment opportunities | 36\% | 36\% | 27\% | 32\% |
| Shopping opportunities | 46\% | 39\% | 17\% | 32\% |
| Availability of behavioral health services | 30\% | 31\% | 23\% | 27\% |
| Availability of housing | 26\% | 36\% | 24\% | 26\% |
| Availability of good jobs | 32\% | 35\% | 16\% | 25\% |
| Availability of care for the elderly | 23\% | 33\% | 23\% | 24\% |
| Cost of Energy | 23\% | 19\% | 22\% | 22\% |
| The overall state of the local economy | 20\% | 29\% | 18\% | 20\% |
| Availability of childcare | 16\% | 19\% | 13\% | 15\% |
| Real estate taxes | 15\% | 13\% | 16\% | 15\% |

The 2023 community indicators are sorted from top to bottom of Table 6, from the least to the most positively perceived by residents. The brown-shaded number in each row is the largest result found for each survey question, providing an easy method to determine in which of the three studied counties each quality-of-life indicator is most commonly perceived currently as poor. For quick reference, considering the sample sizes collected each county in the 2023 North Country Annual Survey of the Community, a difference of 5\% or larger between any two counties (between any two numbers located in the same row) may be considered a statistically significant difference. (For more detail regarding statistical significance, please refer to Appendix III of this report: "Technical Comments - Assistance in Interpretation of the Statistical Results.")

## Table 6 - SUMMARY of "Relative Standing" - Year 2023 - All 21 Quality-of-life Indicators Compared Across Counties - Rate of Responding "Poor"

| Community Indicator: | Jefferson | Lewis | St. Lawrence | Three-county Region Combined |
| :---: | :---: | :---: | :---: | :---: |
| Real estate taxes | 37\% | 42\% | 45\% | 41\% |
| Cost of Energy | 39\% | 42\% | 40\% | 40\% |
| The overall state of the local economy | 30\% | 28\% | 47\% | 38\% |
| Availability of good jobs | 27\% | 27\% | 46\% | 36\% |
| Availability of care for the elderly | 27\% | 22\% | 41\% | 33\% |
| Availability of housing | 30\% | 27\% | 35\% | 32\% |
| Shopping opportunities | 16\% | 22\% | 50\% | 32\% |
| Availability of childcare | 29\% | 27\% | 35\% | 31\% |
| Availability of behavioral health services | 24\% | 25\% | 29\% | 27\% |
| Cultural and entertainment opportunities | 19\% | 24\% | 31\% | 25\% |
| Health care access | 22\% | 9\% | 31\% | 25\% |
| Health care quality | 21\% | 12\% | 24\% | 21\% |
| City, town, and village government | 21\% | 12\% | 21\% | 20\% |
| The downtown of Watertown | 19\% | - | 21\% | 19\% |
| County government | 19\% | 19\% | 18\% | 19\% |
| Policing and crime control | 11\% | 10\% | 23\% | 16\% |
| The overall quality of life in the area | 12\% | 5\% | 19\% | 14\% |
| Public outdoor recreational opportunities | 12\% | 8\% | 14\% | 12\% |
| Quality of K-12 education | 7\% | 7\% | 13\% | 10\% |
| Access to higher education | 9\% | 16\% | 7\% | 9\% |
| Quality of the environment | 8\% | 2\% | 11\% | 9\% |

## Section 3.1.2 - Trends for Community Quality-of-Life Indicators

Next, each of these studied indicators is presented as a motion picture - showing how attitudes have changed over time in the North Country. The gray-shaded cell in each row of Tables 7-9 is the largest percentage responding "Excellent or Good" found throughout the studied years for each survey question. For quick reference, considering the sample sizes collected each year in the North Country Annual Survey of the Community, a difference of $5 \%$ or larger between any two years (between any two numbers located in the same row) may be considered a statistically significant trend, or change over time. (For more detail regarding statistical significance, please refer to Appendix III of this report: "Technical Comments Assistance in Interpretation of the Statistical Results.")

## Table 7 - SUMMARY of "Trends" in Jefferson County - Years 2000-2023 - All 21 Quality-of-life Indicators Compared Across Time and to the Longterm Average - Rate of Responding "Excellent or Good"

| Indicator | 233 | 2301 | $2 m^{2}$ | 230 | 2334 | 235 | 2304 | 2377 | 2013 | 203 | 290 | 311 | 2112 | 214 | 2314 | 2315 | 2198 | 2317 | 2918 | 2319 | 270 | ${ }^{231}$ | 2 m | $2 m 2$ | and |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

## Section 3.1.3 - A Long Term Perspective of 2023 Results - Compare to Long Term Averages - the Delta's

The following graph illustrates the current 2023 results for "Excellent or Good" for each of the 21 quality-of-life indicators compared to the average rate found over preceding years. This allows the reader to gain a wide perspective of which indicators are rated more positively or negatively than the typical rate.

## Section 3.1.4-2023 Detailed Results for Community Quality-of-Life Indicators

This section of the study provides a detailed presentation of the results for each of the questions in the survey. Tables 10-30, shown on the following pages, provide the greatest level of detail in results in 2023 for the twenty-one investigated quality-of-life indicators. In these twenty-one tables (pages), the result for each of the quality-of-life indicators is shown both by county and regionally, including all possible responses to each survey question in 2023. A trend analysis is also completed for each of the quality-of-life indicators, comparing to results from earlier years of study in each county. Finally, cross-tabulations by the key demographic factors (Gender, Age, Education, Political Ideology, Military Affiliation, Race/Ethnicity, and Annual Household Income) have been completed using the 2023 combined regional data for each survey question. Inspection of the results after cross-tabbing by any of these demographic factors allows the reader to better understand factors that may be significantly associated with perceptions of quality-of-life characteristics of the region. A similar reporting design, or approach, will be utilized throughout the remainder of this report for every individual survey question included in the survey instrument. The results for each survey question are presented in this section of the report with the following organizational structure:
(1) The current 2023 North Country Regional result, as well as county-specific results for each of Jefferson, Lewis, and St. Lawrence County results for all sampled residents are combined and summarized in a frequency distribution table that shows the weighted sample proportion for each possible survey response and unweighted sample size collected for the survey question (recall, the weighted results are weighted for Gender, Age, Education Level, Race/Ethnicity, Military Affiliation, and Sampling Modality). Statistically significant differences between counties may be identified by using the descriptions and examples shown in Appendix III of this report.
(2) A current 2023 Northern New York county-level regional comparison analysis is completed and shown in a bar graph for each survey question that was measured in more than one of the three counties of Jefferson, Lewis, and/or St. Lawrence in the year 2023. Countyspecific and regional aggregate results are illustrated graphically with this bar graph. Statistically significant differences between counties may be identified by using the descriptions and examples shown in Appendix III of this report.
(3) A trend analysis is completed and shown in a county-separated line graph for each survey question that was measured in at least two of the twenty-four years 2000-2023. The data that underlies these trend line graphs is included in a more detailed tabular format for every survey question, within each county, in Appendix I. Statistically significant trends may be identified by using the descriptions and examples shown in Appendix III of this report.
(4) Finally, the 2023 North Country combined three-county regional results for each survey question have been cross-tabulated by each of the demographic factors of County, Gender, Age, Education Level, Political Ideology, Race/Ethnicity, Military Affiliation, and Household Income Level and illustrated in stacked bar graphs (there are a total of over 800 crosstabulation subgroup distributions included in the graphs in this section of this report). Statistically significant relationships between variables, or differences between subgroup distributions, may be identified by using the descriptions and examples shown in Appendix III of this report, and inspection of the detailed cross-tabulation tables included in Appendix II.

For further explanation of the statistical concepts of "Margin of Error" and "Statistical Significance," to assist the reader in best interpreting and utilizing the presented information, please refer to Appendix III of this report - "Technical Comments - Assistance in Interpretation of the Statistical Results."

## "Framing" a Statistic - Providing Perspective to Better Understand, Interpret, and Use this Survey Data

The rationale behind providing so many analyses (statistics) for every survey question included in this study is that one never fully understands the information contained in a reported statistic without "framing" that statistic. Framing involves adding a richer perspective to the value of some reported statistic. For example, consider if Lewis County residents were asked the survey question: "When considering you or your family's personal financial situation has it gotten better, stayed about the same, or gotten worse in the past 12 months?", and the result is that $44.1 \%$ of the Lewis County participants responded with gotten worse. (Table 34) So .... what does this $44.1 \%$ really mean? Often-times communitybased researchers will describe the process of "framing" a statistic as completing as many as possible of the six following comparisons (frames) to better understand a reported statistic from a sample:

- Within Response Distribution (Is it a majority? 4:1 ratio? "Three times more likely to respond with "better" .... than "worse"?)
- Trend Across Time
(Has it increased? Decreased?)
- Compare to Target/Benchmark (Compare to an agency or community's goal or target?)
- Compare to A Regional Average Result
(Compare to some regional average or similar counties?)
- Ranking Among Similar Variables
(Among many different similar locations, characteristics, options, or attributes, that all use the same response scale, is this specific item ranked first? last?)
- Cross-tabulations by Potential Explanatory Variables
(Different political ideological people differ in opinion or behavior? Age-dependent? Gender-dependent? Education-dependent? Income-dependent?)
The design of this final study report of findings includes all of the various types of tables that are necessary to allow community leaders to best "frame the statistics" included in this report, best understand the statistics included, and make best decisions in the future regarding how to use the statistics. As has been mentioned several times previously, if one has further questions about "framing a statistic" please contact the professional staff at the Center for Community Studies.

Table 10 - Cultural/Entertainment Opportunities

## Section 4 - Final Comments

This report is a presentation of the information collected from approximately 21,500 interviews of adult residents of Jefferson, Lewis, and St. Lawrence Counties, New York conducted between 2000 and 2023. The Center for Community Studies exists to engage in a variety of community-based research activities, and to promote the productive discussion of ideas and issues of significance to our community. As such, the results of this survey are available for use by any citizen or organization in the community. If you use information from this survey, we simply ask that you acknowledge the source.

These interviews produced a large volume of data, which can be analyzed and assessed in a number of different ways. Please contact the Center for Community Studies for specific analyses. Additionally, we are available to make presentations of these survey findings to community groups and organizations upon request. Please contact:

The Center for Community Studies<br>1220 Coffeen Street<br>Watertown, NY 13601<br>Telephone: (315) 786-2264

Joel LaLone, Director jlalone@sunyjefferson.edu www.sunyjefferson.edu/community/community-studies/

The Twenty-fifth Annual North Country Survey of the Communities is tentatively scheduled for October 2024.

# Appendix III - Technical Comments - Assistance in Interpretation of the Statistical Results in this Report 

The results of this study will be disseminated to, and utilized in decision-making by, a very wide array of readers who, no doubt, have a very wide array of statistical backgrounds. The following comments are provided to give guidance for interpretation of the presented findings so that readers with less-than-current statistical training might maximize the use of the information contained in the $24^{\text {th }}$ Annual North Country Survey of the Community.

## Margin of Error - Constructing Confidence Intervals to Estimate for an Entire Population

When data is collected, of course, it is only possible for the researcher to analyze the results of the sample data, the data from the group of individuals actually sampled, or in this case, actually interviewed. However, it is typically the goal of the researcher to use this sample data to draw a conclusion, or estimate that which they believe is true, for the entire population from which the sample was selected. To complete this estimation the standard statistical technique is to construct a confidence interval - an interval of values between which one can be $95 \%$ certain, or confident, that the true population value will fall. For example, if a researcher interviews $\mathrm{n}=500$ randomly selected participants from some population of size $N=100,000$ individuals, and the researcher finds that $x=200$ of the 500 sampled participants indicate that they "agree" with some posed statement ( 200 out of 500 would be $40 \%$ ), then the researcher can never be $100 \%$ certain that if all 100,000 population members were, in fact, interviewed then the result for this entire population investigation would be that $40 \%$ (that would be 40,000 out of the 100,000 ) would "agree." In general, one can never guarantee with $100 \%$ certainty that a statistic for some random sample will perfectly, exactly, result the same as the population value that describes the entire population (this value is called a "parameter"). Fortunately, considering the types of variables and resulting data that typically are generated in survey research, use of the statistical tools of probability distributions and sampling distributions allows the determination of a very important distance - the distance that one would expect $95 \%$ of the samples of size $n$ to fall either above or below the true population value. This distance is commonly referred to as the margin of error. Once this distance (margin of error) is measured, there is a $95 \%$ probability that the sample result (the result of the $\mathrm{n}=500$ sampled participants in the illustration above) will fall within that distance of the true population value. Therefore, to construct the very useful and easily-interpreted statistical estimation tool known as a confidence interval, all one must do is calculate the margin of error and add-and-subtract it to-and-from the sample result (statistic) and the outcome is that there is a $95 \%$ chance that the resulting interval does, in fact, include the true population value within the interval.

To illustrate the above-described concepts of margin of error and confidence intervals, recall that the 2023 margin of error for this survey has been earlier stated in Table 3 in the Methodology section in this report as approximately $\pm 3.2$ percentage points. Therefore, when a percentage is observed in one of the included tables of statistics in this report, the appropriate interpretation is that we are $95 \%$ confident that if all North Country adult residents were surveyed (rather than only the 1,171 that were actually surveyed), the percentage that would result for all residents would be within $\pm 3.2$ percentage points of the sample percentage that we surveyed, calculated, and reported in this study. For example, in Table 16, it can be observed that $18.3 \%$ of the sample of 1,168 adults ( 3 of the 1,171 participants omitted this survey question) report that they believe that the quality of the environment in their county is "Excellent". With this sample result, one could infer with $95 \%$ confidence that if all North Country adults were asked - somewhere between $15.1 \%$ and $21.5 \%$ of the population of approximately 190,000 adults in the North Country believe that the quality of the environment in their county is "Excellent" (started with the $18.3 \%$ that was found in the sample and added-and-subtracted a margin of error of $\pm 3.2 \%$ ). This resulting interval ( $15.1 \%-21.5 \%$ ) is known as a $95 \%$ Confidence Interval. The consumer of this report should use this pattern when attempting to generalize any of these survey findings for survey questions that were answered by all $\approx 1,171$ participants in this study to the entire adult population of the North Country in 2023. When attempting to generalize results for survey questions which had smaller sample sizes (the result of either screening questions, or participants refusing to answer certain questions, or investigating smaller demographic subgroups, such as only those over the age of 60), the resulting margin of error will be larger than $\pm 3.2$ percentage points. Table 3 presented earlier in this report, provides approximate margin of error values that should be used with sample sizes of less than $n=1,171$.

## Margin of Error - More Detail for Those Interested in Maximizing Precision and Accuracy of Estimates

The introductory example above relating to the quality of the environment used a margin of error of $\pm 3.2 \%$, as a result of an illustration that used all 1,171 participants in this study. However, again, the margin of error when using the sample results in this study to construct a confidence interval to estimate a population percentage will not always be $\pm 3.2 \%$. There is not one universal value of a margin of error that can be precisely calculated and used for the results for every
question included in this survey, or for that matter, any multiple-question survey. Calculation methods used in this study for generating the margin of error depend upon the following factors (which include three factors in addition to the sample-size factor that has been mentioned earlier in Table 3):

1. The sample size is the number of adults who validly answered the survey question. The sample size will not always be $n=1,171$ since individuals have a right to omit any question. Additionally, some survey questions were only posed after screening questions. In general, the smaller the sample size then the larger the margin of error, and conversely, the larger the sample size then the smaller the margin of error.
2. The sample proportion or percentage is the calculated percentage of the sample who responded with the answer or category of interest (i.e. responded "Agree"). This percentage can vary from $0 \%-100 \%$, and, of course, will change from question to question throughout the survey. In general, the further that a sample percentage varies from $50 \%$, in either direction (approaching either $0 \%$ or $100 \%$ ), the smaller the margin of error, and conversely, the closer that the actual sample percentage is to $50 \%$ then the larger the resulting margin of error. As an example, if 160 out of 400 sampled residents "Agree" with some posed statement, then the sample proportion would be ( $160 \div 400=0.4=40 \%$ )
3. The confidence level used in generalizing the results of the sample to the population that the sample represented. In this study, the standard confidence level used in survey research, 95\% confidence level, will be used for all survey questions.
4. The design effect (DEFF) is a factor used in the calculation of the margin of error that compensates for the impact upon the size of the margin of error of having a sample whose demographic distributions do not well-parallel the distributions of the entire population that the sampling is attempting to represent. In general, the further that the sample demographic distributions deviate from the population distributions then the larger the design effect (margin of error), and conversely, the closer that the sample demographic distributions parallel the population distributions then the smaller the design effect (margin of error). Essentially the design effect reflects the magnitude of the impact that reliance upon weighting of sample results will have upon the reliability of population estimates. Note that the design effect for this study is approximately 2.0.

In mathematical notation, the margin of error (ME) for each sample result for this study would be represented as:

$$
M E=1.96 \cdot \sqrt{\frac{p(100-p)}{n}} \cdot \sqrt{D E F F}
$$

Where $n=$ sample size $=$ \# valid responses to the survey question
$\mathrm{p}=$ sample percentage for the survey question (between 0\%-100\%)
$1.96=$ the standard normal score associated with the $95 \%$ confidence level
DEFF $=$ the design effect
and

$$
D E F F=\frac{n \cdot \sum w_{i}^{2}}{\left(\sum w_{i}\right)^{2}}
$$

with $\quad$ wi=the post-stratification weight associated with $i^{\text {ith }}$ of the 1,171 sampled individuals
An example of using this Margin of Error formula would be that if 300 residents are sampled and validly answer some survey question, and 60 of those 300 residents report that they "Strongly Agree" with some statement, then the sample proportion is $p=(60 / 300)=0.2=20 \%$. Therefore the margin of error for this sample (whose n is only 300 ) that has a sample proportion that deviates quite largely from $50 \%$, is found by: (please refer to Table 48 to verify)

$$
M E=1.96 \cdot \sqrt{\frac{p(100-p)}{n}} \cdot \sqrt{D E F F}=1.96 \cdot \sqrt{\frac{(20)(100-20)}{300}} \cdot \sqrt{2.0}=6.4 \%
$$

Since the sample size varies (in fact, could conceivably be different for every question included in the survey) and the sample percentage varies (also, could conceivably be different for every question included in the survey) the following table (Table 48) has been provided for the reader to determine the correct margin of error to use whenever constructing a confidence interval using the sample data presented in this study. This table was generated using the ME formula shown above.

## Table 48 - More Detailed Margins of Error for Varying Sample Sizes and Varying Sample Proportions

Varying Sample Sizes ( $\mathrm{n}=\ldots$...)

| 76\% | 21.6\% | 16.7\% | 11.8\% | 9.7\% | 8.4\% | 7.5\% | 6.8\% | 6.3\% | 6.0\% | 5.9\% | 5.7\% | 5.3\% | 4.8\% | 4.5\% | 4.2\% | 3.9\% | 3.7\% | 3.6\% | 3.5\% |
| 78\% | 21.0\% | 16.2\% | 11.5\% | 9.4\% | 8.1\% | 7.3\% | 6.6\% | 6.1\% | 5.8\% | 5.7\% | 5.5\% | 5.1\% | 4.7\% | 4.3\% | 4.1\% | 3.8\% | 3.6\% | 3.5\% | 3.4\% |
| 80\% | 20.2\% | 15.7\% | 11.1\% | 9.1\% | 7.8\% | 7.0\% | 6.4\% | 5.9\% | 5.6\% | 5.5\% | 5.3\% | 5.0\% | 4.5\% | 4.2\% | 3.9\% | 3.7\% | 3.5\% | 3.3\% | 3.2\% |
| 82\% | 19.4\% | 15.1\% | 10.6\% | 8.7\% | 7.5\% | 6.7\% | 6.1\% | 5.7\% | 5.4\% | 5.3\% | 5.1\% | 4.8\% | 4.3\% | 4.0\% | 3.8\% | 3.5\% | 3.4\% | 3.2\% | 3.1\% |
| 84\% | 18.6\% | 14.4\% | 10.2\% | 8.3\% | 7.2\% | 6.4\% | 5.9\% | 5.4\% | 5.2\% | 5.1\% | 4.9\% | 4.5\% | 4.1\% | 3.8\% | 3.6\% | 3.4\% | 3.2\% | 3.1\% | 3.0\% |
| 86\% | 17.6\% | 13.6\% | 9.6\% | 7.9\% | 6.8\% | 6.1\% | 5.6\% | 5.1\% | 4.9\% | 4.8\% | 4.6\% | 4.3\% | 3.9\% | 3.6\% | 3.4\% | 3.2\% | 3.0\% | 2.9\% | 2.8\% |
| 88\% | 16.4\% | 12.7\% | 9.0\% | 7.4\% | 6.4\% | 5.7\% | 5.2\% | 4.8\% | 4.6\% | 4.5\% | 4.3\% | 4.0\% | 3.7\% | 3.4\% | 3.2\% | 3.0\% | 2.8\% | 2.7\% | 2.6\% |
| 90\% | 15.2\% | 11.8\% | 8.3\% | 6.8\% | 5.9\% | 5.3\% | 4.8\% | 4.5\% | 4.2\% | 4.2\% | 4.0\% | 3.7\% | 3.4\% | 3.1\% | 2.9\% | 2.8\% | 2.6\% | 2.5\% | 2.4\% |
| 92\% | 13.7\% | 10.6\% | 7.5\% | 6.1\% | 5.3\% | 4.8\% | 4.3\% | 4.0\% | 3.8\% | 3.8\% | 3.6\% | 3.4\% | 3.1\% | 2.8\% | 2.7\% | 2.5\% | 2.4\% | 2.3\% | 2.2\% |
| 94\% | 12.0\% | 9.3\% | 6.6\% | 5.4\% | 4.7\% | 4.2\% | 3.8\% | 3.5\% | 3.3\% | 3.3\% | 3.2\% | 2.9\% | 2.7\% | 2.5\% | 2.3\% | 2.2\% | 2.1\% | 2.0\% | 1.9\% |
| 96\% | 9.9\% | 7.7\% | 5.4\% | 4.4\% | 3.8\% | 3.4\% | 3.1\% | 2.9\% | 2.8\% | 2.7\% | 2.6\% | 2.4\% | 2.2\% | 2.1\% | 1.9\% | 1.8\% | 1.7\% | 1.6\% | 1.6\% |
| 98\% | 7.1\% | 5.5\% | 3.9\% | 3.2\% | 2.7\% | 2.5\% | 2.2\% | 2.1\% | 2.0\% | 1.9\% | 1.9\% | 1.7\% | 1.6\% | 1.5\% | 1.4\% | 1.3\% | 1.2\% | 1.2\% | 1.1\% |

## Illustration of how to use Table 48 to determine the correct margin of error when investigating subgroups:

To estimate the percentage in the entire population of Lewis County adults who believe that the overall state of the local economy is at least good (Excellent or Good) one must simply refer to Table 24 and it can be observed that 28.7\% of the 348 sampled Lewis County participants replied with at least good (3.8\% indicated Excellent, while another 24.9\% indicated Good). Reference to Table 48 on the preceding page indicates that the appropriate margin of error would be $\pm 6.7 \%$ (used $p=28 \%$, the closest to $28.7 \%$ that is shown in Table 48; and used $n=349$, the closest to 348 that is included in Table 48). Therefore, we can be $95 \%$ confident that if all Lewis County adults were to evaluate the state of the local economy the resulting percentage who would indicate at least good among this population would be within $\pm 6.7 \%$ of the $28.7 \%$ found in our sample. The interpretation of this would be that we are $95 \%$ confident that among all Lewis County adults the percentage who believe that the state of the local economy is at least good would be somewhere between $22.0 \%$ and $35.4 \%$. Note that this margin of error of 6.7 percentage points is larger than the earlier-cited study margin of error of approximately 3.2 percentage points as a result of there being only 348 adults in this county-specific sample ( $\mathrm{n}=348$, not 1,171 , for this example). Also, please note that readers who desire a greater level of accuracy than this estimated margin of error that has been excerpted from Table 48, one may directly calculate the exact margin of error using $\mathrm{p}=28.7$ and $\mathrm{n}=348$ and $D E F F=2.0$ in the ME formula shown on page 123.

## Significance Testing - Testing for Statistically Significant Trends, Differences, and Relationships

The technical discussion of statistical techniques above has focused on the statistical inference referred to as estimation - construction of confidence intervals using the margins of error described in the tables shown on preceding pages. To take full advantage of the data collected in this study, other statistical techniques are of value. Tests for significant trends over time within the North Country, tests for differences between the three annually studied North Country counties, tests for significantly correlated factors with measured variables, and tests to compare response distributions for similarlyscaled variables within the the North Country data in 2023 are presented as well.

A comment or two regarding "statistical significance" could help readers of varying quantitative backgrounds most appropriately interpret the results of what has been statistically analyzed. Again, because the data for the $24^{\text {th }}$ Annual North Country Survey of the Community is based on a sample of 1,171 adult residents, as opposed to obtaining information from every single adult resident in the three counties, there must be a method of determining whether an observed relationship or difference in the sample survey data is likely to continue to hold true if every adult resident of the region were, in fact, interviewed. To make this determination, tests of statistical significance are standard practice in evaluating sample survey data.

For example, if the sample data shows that male residents are more likely to report that the quality of the environment is Excellent in Lewis County than female residents ( $32.9 \%$ vs. $27.6 \%$, respectively, Table 16 in Appendix II), the researcher would want to know if this higher satisfaction with the quality of the environment among male residents would still be present if they interviewed every Lewis County adult rather than just the sample of 349 Lewis County adults who were actually interviewed. To answer this question, the researcher uses a test of statistical significance. The outcome of a test of statistical significance will be that the result is either "not statistically significant" or the result is "statistically significant."

The meaning of "not statistically significant" is that if the sample were repeated many more times (in this case that would mean many more different groups of $n=349$ randomly selected adults from the approximately 20,000 adults in Lewis County), then the results of these samples would not consistently show that male residents are more likely to report that the quality of the environment is Excellent in Lewis County than female residents; some samples would have males higher and some would have females higher. In this case, the researcher could not report with high levels of confidence that the male satisfaction rate is statistically significantly different from the female rate. Rather, in this case the difference found between males and females in the one actually selected sample of size $n=349$ Lewis County residents would be interpreted as small enough that it could be due simply to the random chance of sampling - not statistically significant. Again, the determination of "how far apart is far enough apart to be statistically significant?" is calculated by using sampling distributions and the margins of error described earlier. These tools allow the measurement of how far apart sample subgroups must be to be interpreted as a very unlikely difference to occur simply by random chance (if one assumes that the population values for the subgroups are, in fact, equal).

Conversely, the meaning of "statistically significant" is that if the sample were repeated many more times, then the results of these samples would consistently show that male Lewis County adults are more likely to report the quality of the environment is Excellent than females; and further, if every adult were interviewed, we are confident that the population "perceived as Excellent" rate among males would be higher than the rate among females. One can never be $100 \%$ certain (or confident) that the result of a sample will indicate appropriately whether the population percentages are, in fact, statistically significantly different from one another or not. However, using the standard confidence level of $95 \%$, an interpretation of "not statistically significant" means that the size of the observed sample difference would naturally be expected to be found in 95 out of 100 random samples of similar size $n$. The interpretation of a "statistically significant" difference is that it is so large that there is a probability of less than $5 \%$ that this difference occurred simply due to the
random chance of sampling (if one assumes that the population values for the subgroups are, in fact, equal) - instead, it is considered a "real" difference. In statistical vocabulary and notation, this would be represented as a p-value of less than $5 \%(p<0.05)$.

## Correlated Explanatory Variables - How does one decide if there is a "statistically significant" correlation?

Throughout this report, cross-tabulation comparisons for "relationships between collected variables" have been completed. With investigations for relationships between variables, the focus is the identification of correlations between variables - is the result for some survey question different when looking at various subgroups (or, levels) of some other variable? Again, referring to the "quality of the environment" scenario, one could observe in Table 16 in Appendix II that the "Excellent" rate among males is $32.9 \%$, and compare this to the rate among females (which is only 27.6\%). A very small difference between these within-subgroup rates (or, proportions) could be small enough to quite likely occur simply due to the random chance of sampling when the real population values for all males and all females in the county are equal - found to be not a statistically significant difference ( $p>0.05$ ). Conversely, a very large difference between these withinsubgroup proportions could be large enough to be quite unlikely to occur simply due to the random chance of sampling when the real population values for all males and all females in the county are equal - found to be a statistically significant difference ( $\mathrm{p}<0.05$ ).

How does one determine if the observed difference in rates (or, percentages) when comparing subgroups is large enough to be statistically significant, or so small that it is not statistically significant? The rule that should be applied to determine statistical significance is:

1. Sample percentages in the same row and subtable (comparing demographic subgroups) not sharing the same subscript are significantly different at $p<.05$.
2. Sample percentages in the same row and subtable (comparing demographic subgroups) sharing the same subscript are not significantly different at $p<.05$.
All tests have been completed using the two-proportion z-test. Subsequent cell adjustment for all pairwise comparisons within a row of each innermost sub-table using the Bonferroni Multiple Comparison corrections has been completed when necessary. Tests assume equal variances. All results for all significance tests are reported in the associated cross-tabulation contingency tables using APA-style subscripts.

As an example, the demographic cross-tabulations for satisfaction with "quality of the environment" for Lewis County in 2023 are shown below (and, also later in this report this is Table 16 in Appendix II):

|  |  | Lewis County | Gender |  | Age Groups |  |  |  | Education Level |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | All Participants | Male | Female | 18-39 | 40-59 | 60-69 | 70+ | HSG | SC | 4+YD |
| Quality of the environment | Excellent | 30.5\% ${ }^{1}$ | 32.9\% ${ }_{\text {a }}$ | 27.6\% ${ }_{\text {a }}$ | 38.1\% ${ }_{\text {a }}$ | 20.1\% ${ }_{\text {b }}$ | 36.1\% ${ }_{\text {a,b }}$ | 32.8\% $\mathrm{a}, \mathrm{b}$ | 23.2\% ${ }_{\text {a }}$ | 37.4\% ${ }_{\text {b }}$ | 37.2\% $\mathrm{a}, \mathrm{b}$ |
|  | Good | 53.5\% ${ }^{1}$ | 51.3\% ${ }_{\text {a }}$ | 56.1\% ${ }_{\text {a }}$ | 48.1\% ${ }_{\text {a }}$ | $55.4 \%$ | 59.1\% ${ }_{\text {a }}$ | $52.0 \%$ | 65.8\% ${ }_{\text {a }}$ | 45.0\% ${ }_{\text {b }}$ | $37.2 \%_{\text {b }}$ |
|  | Fair | 13.6\% ${ }^{1}$ | 13.1\% ${ }_{\text {a }}$ | 14.3\% ${ }_{\text {a }}$ | 10.7\% ${ }_{\text {a,b }}$ | 22.9\%a | 4.3\% ${ }_{\text {b }}$ | 10.8\% $\mathrm{a}, \mathrm{b}$ | 9.6\% ${ }_{\text {a }}$ | 14.0\% ${ }_{\text {a,b }}$ | 22.9\% ${ }_{\text {b }}$ |
|  | Poor | 2.2\% ${ }^{1}$ | 2.7\% ${ }_{\text {a }}$ | 1.7\% ${ }_{\text {a }}$ | $3.1 \%$ a | 1.7\% ${ }_{\text {a }}$ | 0.5\% ${ }_{\text {a }}$ | $3.6 \%$ a | 1.4\% ${ }_{\text {a }}$ | $3.2 \%$ a | 2.3\% ${ }_{\text {a }}$ |
|  | Don't Know | 0.2\% ${ }^{1}$ | 0.0\% ${ }^{2}$ | 0.3\%a | 0.0\% ${ }^{2}$ | 0.0\% ${ }^{2}$ | 0.0\% ${ }^{2}$ | 0.9\% ${ }_{\text {a }}$ | 0.0\% ${ }^{2}$ | 0.3\% ${ }_{\text {a }}$ | 0.4\% ${ }_{\text {a }}$ |
|  | Total | 100.0\% | 100.0\% | 100.0\% | 100.0\% | 100.0\% | 100.0\% | 100.0\% | 100.0\% | 100.0\% | 100.0\% |
|  | Unweighted n | 347 | 128 | 217 | 42 | 112 | 96 | 96 | 72 | 156 | 119 |

This cross-tabulation table for Lewis County shows that in $2023,32.9 \%$ of male participants rate the quality of the environment in the county as "Excellent", while only $27.6 \%$ of female participants do so, and since these two groups do share a subscript (males and females are both designated as "a"), the two groups do not differ statistically significantly. In 2023 in Lewis County, men are not significantly more nor less satisfied with the quality of the environment than are females (when "satisfaction" is defined as a rating of "Excellent"). The above-described process is the appropriate process to use whenever comparing subgroups within the data set that has been collected and analyzed within this study.

## Regional Comparisons - How does one decide if a county is "statistically significantly" different from other counties?

The same concept of statistical significance that has described in the preceding pages regarding "Correlational Analyses" is also applied when a researcher attempts to complete a "Comparison among North Country Counties" in 2023. The focus now becomes the comparison of the 2023 county-specific results to one another. How does one determine if the observed difference in rates (or, percentages) when comparing counties is large enough to be statistically significant, or so small that it is not statistically significant? The rule that should be applied to determine statistical significance is:

1. Sample percentages in the same row and subtable (comparing demographic subgroups) not sharing the same subscript are significantly different at $\mathrm{p}<.05$.
2. Sample percentages in the same row and subtable (comparing demographic subgroups) sharing the same subscript are not significantly different at $p<.05$.

All tests have been completed using the two-proportion z-test. Subsequent cell adjustment for all pairwise comparisons within a row of each innermost sub-table using the Bonferroni Multiple Comparison corrections has been completed when necessary. Tests assume equal variances. All results for all significance tests are reported in the associated cross-tabulation contingency tables using APA-style subscripts.

As an example, the county comparison cross-tabulations for satisfaction with "Overall State of the Local Economy" for this North Country study in 2023 are shown below (and, also in the body of the report this is Table 24):

| The overall state of the local economy |  | Jefferson | Lewis | St. Lawrence | 3-County Region |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | Excellent | 2.1\% ${ }_{\text {a }}$ | 3.8\% ${ }_{\text {a }}$ | 0.0\% ${ }^{1}$ | 1.4\% |
|  | Good | 17.7\%a | 24.9\% ${ }_{\text {a }}$ | 18.2\% ${ }_{\text {a }}$ | 18.7\% |
|  | Fair | 43.6\% ${ }_{\text {a }}$ | 39.2\% ${ }_{\text {a,b }}$ | $33.7 \%_{\text {b }}$ | 38.7\% |
|  | Poor | 30.4\% ${ }_{\text {a }}$ | 28.1\% ${ }_{\text {a }}$ | 47.2\% ${ }_{\text {b }}$ | 37.7\% |
|  | Don't Know | 6.2\% a | 4.0\% ${ }_{\text {a }}$ | 0.9\% ${ }_{\text {b }}$ | 3.6\% |
|  | Total | 100.0\% | 100.0\% | 100.0\% | 100.0\% |
|  | Sample sizes | 429 | 348 | 388 | 1165 |

This above cross-tabulation table shows that in 2023, 30.4\% of Jefferson participants rate Overall State of the Local Economy in their county as "Poor", while only $28.1 \%$ of Lewis participants do so, however, a much larger $47.2 \%$ of St. Lawrence participants do so. Since these three counties do not share a subscript (Jefferson and Lewis are "a", while St. Lawrence is " b "), the groups do differ statistically significantly. In 2023 in St. Lawrence County residents are significantly more likely to rate the Overall State of the Local Economy as "Poor" than are residents of either of the other two counties, and Jefferson and Lewis do not differ from one another. The above-described process is the appropriate process to use whenever comparing counties within the data set that has been collected and analyzed within this study.

## Trend Analysis - How does one decide if a county has "statistically significantly" changed over time?

Whenever possible in this report, comparisons are made between the current results and the results in earlier community studies completed in each county. The research question that is being investigated in these comparisons is, "Has there been any statistically significant change in attitudes or behaviors among the adult residents in the county between 2000 and 2023?"

When interpreting the comparisons that have been provided, the reader should consider the following factors. The Center for Community Studies also completed the earlier studies. The earlier studies used sampling methodology that was very similar to that which was utilized in the present 2023 study, as well as similar post-stratification weighting procedures. However, the earlier survey instruments that were used are not exactly the same instrument that has been used in 2023. Therefore, only the questions/items that were also measured in earlier studies are available for trend analysis to compare with the current results. With the similar methodologies and weighting procedures that have been applied, it is valid to make comparisons between the studies - observe changes or trends. The sample sizes for each of the twenty-four years of the Annual Surveys of the Community are summarized earlier in Table 4.

The same concept of statistical significance that has described in the preceding pages regarding "Correlational Analyses" and "Comparison among North Country Counties" in 2023 is also applied when a researcher attempts to complete a trend analysis. The focus now becomes the comparison of the 2023 results to earlier results (rather than the comparison of counties to each other in a year, illustrated earlier). The technique that is recommended in this study to determine whether a statistically significant trend has occurred in a county is to apply the following method that has also been recommended by the New York State Department of Health in its presentation of the Expanded Behavioral Risk Factor Surveillance System (BRFSS). The NYSDOH 2009 Expanded BRFSS (on page 12 of 151 in that report) cites the following:

> "When the confidence intervals of two estimates of the same indicator from different areas (or, subgroups) do not overlap, they may be said to be statistically significantly different, i.e., these differences are unlikely related to chance and are considered true differences. If there is any value that is included in both intervals, the two estimates are not statistically significantly different."

In other words, first the reader must identify the specific response choice of interest. For example, is one interested in only investigating use "Excellent", or is one more interested in collapsing the two possible response choices of "Excellent" and "Good" together into a response choice group that could be referred to as "At Least Good"? Then, after observing the sample sizes for the years to be compared (in Table 4 of this report), one may refer to Table 48 in this study to identify the correct approximate margins of error (or directly calculate these margins of error with more accuracy and precision using the ME formula shown and demonstrated on page 123) if estimating proportions (or, "percentages" or "rates") for differing years. With these margins of error, two separate confidence intervals may be constructed, one for each year, and the overlap-vs.-non-overlap rule recommended above by the NYSDOH may be applied to determine whether the observed sample difference between years should be considered statistically significant. This technique for testing for statistical significance does include the design effect in measuring the standard error.

To illustrate a trend analysis, please consider the "Quality of K-12 Education" variable for St. Lawrence County. Reference to Table 23 in Appendix I of this report shows that:

In 2015: in St. Lawrence County: $\mathrm{n}=442$ participants (found in Table 4 earlier in this report), and in Table 23 in Appendix I p=65\% responded Excellent or Good; therefore, from Table 48 the approximate margin of error is $\pm 6.4 \%$. The resulting confidence interval for 2015 is: $65 \% \pm 6.4 \%$, or (58.6\%,71.4\%).

In 2023: in St. Lawrence County: $\mathrm{n}=388$ participants, and in Table 23 in Appendix I $\mathrm{p}=56 \%$ responded Excellent or Good; therefore, from Table 48 the approximate margin of error is $\pm 7.0 \%$. The resulting confidence interval for 2023 is: $56 \% \pm 7.0 \%$, or ( $49.0 \%, 63.0 \%$ ).

Since these two confidence intervals do overlap, the difference between 2015 and 2023 in St. Lawrence County (the nine-year trend) is not considered statistically significant. In other words, based upon the sample data collected in this survey, the rate of evaluating the "Quality of K-12 Education" in St. Lawrence County as "Excellent or Good" has not changed significantly between 2015 and 2023. The 56\% rate of responding Excellent or Good in 2023 is not far enough away from (below) the $65 \%$ rate found in 2015 to be a statistically significant change, this $9 \%$ difference is not tremendously unlikely to occur by random chance if the satisfaction rates in the entire adult population in the county are truly the same in these two compared years.

## Comparing Similarly-scaled Variables (Survey Items):

Finally, to determine whether or not a difference observed between two similarly-measured items is statistically significant, the same significant testing method as that which was shown for trend analyses and county comparisons has been applied in this study. The focus now becomes the comparison of the level of satisfaction, or support, or whatever is measured for various similarly-scaled survey items ... for example, is there statistically significantly more (or less) satisfaction for one item versus another? Again, first the reader must identify the specific response choice of interest. For example, is one interested in only investigating "Every day", or is one more interested in collapsing the two possible response choices of "Every day and Most days" together into a response choice group that could be referred to as "At Least Most Days"? Then, one may refer to Table 48 in this study to identify the correct approximate margins of error (or directly calculate these margins of error with more accuracy and precision using the ME formula shown and demonstrated on page 115) if estimating proportions (or, "percentages" or "rates") for differing survey questions that are measured on the same scale. With these margins of error, two separate confidence intervals may be constructed, one for each issue, and the overlap-vs.-non-overlap rule recommended above by the NYSDOH may be applied to determine whether or not the observed sample difference between the survey items should be considered statistically significant. This technique for testing for statistical significance does include the design effect in measuring the standard error.

To illustrate a comparison of strength of support for two separate survey items, please consider the following two direction-of- $\qquad$ survey items among all North Country participants in 2023 - "Generally speaking, would you say things in the country are heading in the right or wrong direction?" (Table 31, in Section 3.2), and "Generally speaking, would you say things in your county are heading in the right or wrong direction?" (Table 33, in Section 3.2).

Country: in 2023 from Table 31, $n=1,159$ participants and $p=13.8 \%$ responded "Right Direction"; therefore from Table 48 the approximate margin of error is $\pm 2.8 \%$. The resulting confidence interval for "Country Right Direction" in 2023 is: $13.8 \% \pm 2.8 \%$, or ( $11.0 \%, 16.6 \%$ ).

County: in 2023 from Table 33, $\mathrm{n}=1,158$ participants and $\mathrm{p}=33.9 \%$ responded "Right Direction"; therefore from Table 48 the approximate margin of error is $\pm 3.8 \%$. The resulting confidence interval for "County Right Direction" in 2023 is: $33.9 \% \pm 3.8 \%$, or ( $\mathbf{3 0 . 1 \% , 3 7 . 7 \% \text { ). }}$

Since these two confidence intervals do not overlap, the difference in rate of responding "Generally speaking, things in my county are heading in the right direction" (33.9\%) and the rate of responding "Generally speaking, things in the country are heading in the right direction" (13.8\%) in 2023 among North Country adults is considered statistically significant. The $33.9 \%$ rate found for the county is far enough away from (above) the $13.8 \%$ rate found for the country to be a statistically significant difference, this $20.1 \%$ difference in responding "Right Direction" is very unlikely to occur by random chance if the rates in the entire North Country adult population are truly the same for these two compared similarly-scaled types of attitudes.

Finally, the preceding comments regarding statistically significant differences between subgroups, statistically significant differences between North Country Counties, statistically significant changes between study years, and statistically significant differences between like-scaled variables are comments addressing statistical significance ... which, of course, is not one-and-the-same as practical significance. The reader should be reminded that statistical significance addresses the concept of probability, as follows - "is this difference likely to occur in a sample of size $n=1,171$
if there is no difference in the entire sampled populations... could the result simply be due to chance?" However, practical significance is an interpretation that is left to the subject area expert, since practical significance addresses the concept of usefulness, as follows - "is this result useful in the real world?" A difference identified in a sample may be statistically significant without being practically significant, however, a difference identified in a sample may not be practically significant without being statistically significant.

Please direct any questions regarding margin of error, confidence intervals, other sources of sampling error, tests of statistical significance, and practical significance to the professional staff at the Center for Community Studies.

## Appendix IV - The 2023 Survey Instrument

## $24^{\text {th }}$ Annual North Country Survey of the Community

The Center for Community Studies at JCC is conducting the $24^{\text {th }}$ Annual North Country Survey of the Community. We do this survey every year and are interested in your opinions about the quality of life and future direction of the region. Do you have a few minutes to do a survey for us?
Q1: Please rate each of the following characteristics of your county as either EXCELLENT, GOOD, FAIR, or POOR. (check the boxes, please)

| Cultural and entertainment opportunities | Excellent | Good | Fair | Poor | DK |
| :--- | :--- | :--- | :--- | :--- | :--- |
| Cost of energy |  |  |  |  |  |
| Health care access |  |  |  |  |  |
| Health care quality |  |  |  |  |  |
| Access to higher education |  |  |  |  |  |
| Public outdoor recreational opportunities |  |  |  |  |  |
| Quality of the environment |  |  |  |  |  |
| County government |  |  |  |  |  |
| Town and village government |  |  |  |  |  |
| Real estate taxes |  |  |  |  |  |
| Policing and crime control |  |  |  |  |  |
| Availability of good jobs |  |  |  |  |  |
| Shopping opportunities |  |  |  |  |  |
| Quality of K-12 education |  |  |  |  |  |
| The overall state of the local economy |  |  |  |  |  |
| Availability of care for the elderly |  |  |  |  |  |
| Availability of housing |  |  |  |  |  |
| Availability of childcare |  |  |  |  |  |
| Availability of behavioral health services |  |  |  |  |  |
| The downtown of Watertown |  |  |  |  |  |
| The overall quality of life in the area |  |  |  |  |  |

Our next group questions relate to other aspects of life in the North Country such as personal financial situation, resident attitudes, and characteristics. These questions are tracked in the county and asked regularly as part of our annual survey.

Q2. Generally speaking, would you say that things in this COUNTRY are heading in the:
_ Right direction __ Wrong direction __ Don't Know/Not sure

Q3. Generally speaking, would you say that things in NEW YORK STATE are heading in the:
__ Right direction
__ Wrong direction
__ Don't Know/Not sure
Q4. Generally speaking, would you say that things in YOUR COUNTY are heading in the:
___ Right direction
__ Wrong direction
___ Don't Know/Not sure
Q5. When considering you or your family's personal financial situation - has it gotten BETTER, stayed about the SAME, or gotten WORSE in the past 12 months? Better $\qquad$ Same $\qquad$ Worse $\qquad$ Not Sure

Q6: Do you believe your county is a good place to grow old? (appropriate supports, elder friendly)
__ Very good __ Fairly good __ Not very good __ Definitely not good __ DK

Q7: Do you agree or disagree that: "The presence of the 10th Mountain Division at Fort Drum since 1985 has improved the overall quality of life of North Country citizens."
___ Strongly agree $\qquad$ Agree __ Disagree $\qquad$ Strongly disagree $\qquad$ No opinion

Q8: How many times have you crossed the border to eastern Ontario during the past year?
$\qquad$ None $\qquad$ 1-2 times $\qquad$ 3-5 times $\qquad$ More than 5 times Not sure

Q9: How severe do you think each of the following issues are for your community, using a scale of: MAJOR ISSUE, MODERATE ISSUE, MINOR ISSUE, or NOT AT ALL AN ISSUE?

|  | Major | Moderate | Minor | Not an <br> Issue | Not <br> Sure |
| :--- | :--- | :--- | :--- | :--- | :---: |
| Crime |  |  |  |  |  |
| Poverty |  |  |  |  |  |
| Mental health |  |  |  |  |  |
| Alcohol abuse |  |  |  |  |  |
| Heroin, or other opiate, abuse |  |  |  |  |  |
| Prescriptive drug abuse |  |  |  |  |  |

Q10: Next, for Statement A and a Statement B, we are interested in which statement you agree with, even if only a little more, $\mathbf{A}$ or $\mathbf{B}$, which is your personal opinion?

| Statement A | Strongly <br> A | Somewhat <br> A | Somewhat <br> B | Strongly <br> B | Statement B |
| :---: | :---: | :---: | :---: | :---: | :---: |
| "Choosing abortion is a <br> woman's right, and <br> society should protect <br> that right." |  |  |  |  |  |
|  |  |  |  |  | "Abortion is morally <br> wrong, and society <br> should prohibit it." |

Q11: What do you think is the single largest issue that is facing residents of the North Country right now?

The last few demographic questions will help us get a better sense of the general nature of the people who have helped us with this project.
COUNTY: In what county do you reside? $\qquad$ Jefferson $\qquad$ Lewis $\qquad$ St. Lawrence TOWN: In what township do you reside? $\qquad$
AGE: Select the category in which your age falls.

| Teens | Twenties | Thirties |
| :--- | :--- | :--- |$\quad$| Forties |
| :--- |
| Fifties |$\quad \_$Sixties $\quad$ ___ Seventies $\quad$ Eighty or older

EDUCATION: Select the category in which your highest level of formal education falls.

| ___ Less than a high school graduate | __ Associate Degree |
| :--- | :--- |
| High school graduate (Include GED) | Bachelor's Degree |
| Some college, no degree (include tech school) | __ Graduate Degree |

POLITICAL BELIEFS: How would you classify your political beliefs?
___ Cory Conservative
___ Middle of the Road _ Liberal
Very Liberal
_ Don't Know

OCCUPATION: What is your occupation? $\qquad$
HOUSEHOLD COMPOSITION: Do any people under the age of 18 are live in your household?
$\qquad$ Yes $\qquad$ No

INCOME: Select the category in which your yearly household income falls:
$\qquad$ Up to $\$ 10,000$ $\qquad$ \$50,001 - \$75,000 \$10,001-\$25,000 $\qquad$ \$75,001-\$100,000 \$25,001 - \$50,000 $\qquad$ \$100,001-\$125,000 $\qquad$ Over \$125,000

MILITARY AFFILIATION: Which of the following describes your affiliation with Fort Drum?
You are active military at FD
$\qquad$ Someone else in the household is AM at FD
$\qquad$ No current/past military affiliation at FD
$\qquad$ Not sure

FORT DRUM EMPLOYMENT: Is your residence in the North Country currently related to either civilian or military employment at Fort Drum, by either you or a family member? $\qquad$ Yes $\qquad$ _ No
RACE: How would you describe yourself in regard to your race or ethnicity?
$\qquad$
PHONE: Which of the following describes your phone ownership? You have....

> __ Both Cell Phone and Landline ___ Landline Only ___ Cell Only

Thank you very much for helping us out this evening. The results will be released in June. If you have any questions, please contact Mr. Joel LaLone, Director of the Center for Community Studies, 315-786-2264 or commstudies@sunyjefferson.edu. Have a great evening.
